**Subject; Bumpers for Piers at Boat Landings**

Fellow Board Members,

This past week I completed a condition review of the districts (3) boat landing piers. Please see the quote provided by Rick Dvorak (\$2,807) to provide, install, and rearrange bumpers & replace (1) support post as follows:

**Upper Post South Shore**

- Space bumpers as per plan
- Install (3) additional heavy-duty side bumpers
- Install (1) corner bumper that is missing

**Upper Post West Shore**

- Remove old roller type bumpers (all are badly worn, damaged or missing)
- Install (8) heavy duty side bumpers to replace rollers
- Replace (2) corner rollers with (2) corner bumpers
- Replace (1) 2" x 1.5" x 6' support post with skid plate
- Replace (1) rubber cap

As far as I know, none of these piers have received any maintenance or replacement parts over the past 4 years. If we decide to make these repairs, we want to get the cost below \$2,500 if we want to avoid bidding.

Please note I have also attached a copy of the inventory report that I completed.

John S.

John,

Thanks for all the leg work on this. To avoid bidding this out can we break it into two quotes, one for the main landing and one for the west shore landing? Or possibly ask Dvorak if they have any recommendations to reduce the total cost to \$2500?

Thanks,

Al Wendorf
